

Velocity Gigabit Fiber

Velocity Gigabit Fiber Network Map - Eagan, MN

If your business is in this area, this is how close you are to getting the fastest, most reliable Internet connection on the market. This is not fiber to the street or to the neighborhood.

We extend fiber directly to your business!

No business is too small or too big for this technology. We will provide an expert analysis of your current service offerings and work with you to develop the proper Fiber solution for your business. And, since we are a Telecommunications and Internet service provider, we can unify your voice and data services all over your Fiber connection.

Customer Testimonials

"I was the first Fiber customer in Eagan. I have never had a more reliable and stable Internet connection, and it is faster and less expensive than all other options we have looked at! I did a download of a 320MB file in 3 minutes. All I know is its FAST and the latency is essentially zero. I am also using it to provide all my Data Back-up and Disaster Recovery services." Todd Kerin, Machine Tool

"Replacing two DSL lines with Velocity fiber has increased our speed, up and down the pipe. It has simplified management of our technical infrastructure, and the personalized service has strengthened our confidence in uninterrupted uptime." Dave Piepkorn, Network FOB, Inc.

Benefits of Gigabit Fiber

Higher Bandwidth

You pick the proper speed for your business, from 10 Megabits to 1 Gigabit. Fiber is super fast and symmetrical (equal download and upload speed).

Reliability

Copper and coax are susceptible to water, electricity, lightning and other interference. Fiber is made of glass so it is not impacted by electricity.

Redundancy

We've built our fiber network in self healing gigabit rings with a redundant 10 gigabit backbone ring.

It's New!

Some Internet facilities provided by the incumbent local exchange carriers and cable companies have been in the ground as long as 100 years. Our fiber is brand new and at the beginning of its life span.

Future Proof

Fiber to the premise is the next generation of broadband. It has expansive growth capability. Become an early adopter and see the advantages it can provide.

Flexible

We provided dedicated bandwidth with the capability to aggregate your data solutions at our colocation suite in the 511 building, which is backhauled on Gigabit Fiber.

Local Support

Our responsiveness and familiarity with your business are some of the main reasons our customers recommend us.

Super Simple Installation

We provide you a simple Ethernet handoff. You plug your router or firewall in, configure your static IP address and you are up and running. It's that easy.
